

GetScreenDensity

(Information and examples taken from the DroidScript documentation)

Description

The **GetScreenDensity** method gets the density of the phone/tablet screen in dots per inch (dpi).

```
app.GetScreenDensity();
```

Example

```
function OnStart()  
{  
    dpi = app.GetScreenDensity();  
    app.ShowPopup( "dpi = " + dpi );  
}
```
