

This is about doing something test `function OnStart()`

```
{    var appjs='<script src="file:/android_asset/app.js"></script>';
    note the backslashes escaping the single quotes below
    var myjs = '<script type="text/javascript"> function myboo(id){ app.Execute("b_test(\'" + id + "\'")}</script>'

    lay = app.CreateLayout("linear", "VCenter,FillXY");

    web = app.CreateWebView(0.8, 0.8);    lay.AddChild(web);    app.AddLayout(lay);

    var b1 = "<button id= 'boo' onclick=myboo(id)>say boo</button>";
    var b2 = "<button id='bah' onclick=myboo(id)>say bah</button>";

    web.LoadHtml(appjs + myjs + b1 + b2);

}
```

```
function b_test(x) { app.ShowPopup(x); };
```

`<\code>`
