DroidScript v1.15

Updated

December 5th, 2014

What's new

v1.15 incorporates changes made in various private betas tested since version 1.12

Please be aware that your /sdcard/AndroidScript folder will be automatically renamed to /sdcard/DroidScript when you first run this version, so if you have hard coded any paths to /sdcard/AndroidScript in your apps (which would be very naughty!) then they won't work as expected

- Added app.SimulateTouch(obj,x,y,dir) method.
- Fixed img.SetTextSize bug.
- GetObjects now correctly returns a map of all user created objects.
- Rename /sdcard/AndroidScript folder to /sdcard/DroidScript.
- Wifi IDE now support HTML, CSS and TXT files.
- Added 3 GLView examples.
- Added MediaStore sample.
- Added cam.GetPixelData() method (useful for Augmented Reality).
- Added img.GetPixelData() method.
- The 'id' parameter is now sent to alarm callbacks.
- Downloader object supports SetOnError callback.
- Downloader object now shows no complete or error messages (user must supply them).
- app.OpenFile("/sdcard/my.htm") now opens with a browser.
- Added optional "px" mode param to *.SetTextSize and *.GetTextSize methods.
- Added txt.GetTextSize method (works with autoscale).
- Added app.GetFreeSpace, app.GetFileDate, app.GetFileSize methods.
- ApkBuilder now works for latest CyanogenMod.
- GLView DrawImage and DrawSprite now supports use of -1 in dest width/height.
- GLView now uses fractional draw parameters for DrawImage and DrawSprite.
- GLView now properly disposed when calling app.DestroyLayout().
- GLView now allows img.Destroy().
- APK debug signing now uses proper android debug key.
- app.OpenURL is allowed in remote webviews.
- app.CreateEmail now gets Internet permissions in APK.
- Added 'Speech Recognition' sample.
- Added 'Audio Record' sample.
- Added 'NoSound' option to buttons etc.
- Added 'AllowZoom', 'AutoZoom', 'Wide' options to app.CreateWebView.
- Added extra 'zoom' parameter to app.CreateWebView method.
- Added "AllowRemote" option to WebView.
- Added app.Call method (makes phone calls given a phone number).

- app.OpenFile params 2 and 3 are now optional.
- Wifi IDE now saves all modified scripts
- Added app.ToBack method (Sends app into background).
- Added 'SetLooping(true/false)' method on MediaPlayer.
- Custom icons now supported on List controls!
- Added lst.SetItem, lst.AddItem, lst.RemoveItem methods.
- Added scroll.GetScrollX, scroll.GetScrollY functions.
- Added app.GetOSVersion method + docs.
- Added app.GetClipboardText method.
- Fixed web server demo.
- Appended app name to SPK share via email subject field.
